

Greater Involvement of PG & RS Students In Student-run Bodies

Brief Introduction

Aimed to increase involvement of PG & RS students in all student run societies, cells and research groups where presently majority of the operations are carried out by the UG students.

Why is it needed?

PG students have a lot of potential, knowledge and experience and their involvement can improve the overall functioning and management of operations of the student organizations in the campus. But these students are not actively involved in most of these activities due to the following two factors:

- Communication gap between PG and UG students
- Less involvement of PG and RS students

However, in interactions with Heads and Governors of the various student bodies that have or had non UG members, it was found that their contributions helps a lot in the overall growth of the organisation. All the stakeholder benefited from such involvement of the PG and RS students.

Salient Features

The UG community must be made aware of the potential of the PG and RS students who can add a lot of value to their bodies. To further promote this, the following steps are proposed:

- At the beginning of each academic year, a report shall be drafted by all the student bodies covering the following points:
 - Action plan for recruitment of PG and RS students
 - Possible work allotment of PG and RS members
 - In case the body had one or more PG and RS members in the previous year, then a performance report stating their contribution as members.
- Proper feedback will be taken by the Technology Students' Gymkhana from the non UG students regarding their experience in the respective student bodies.
- Recruitment Drives: A campaign directed towards recruiting PG and RS members in coherence with the existing practices followed by the bodies.
